What I Automate

Click any card to see the full breakdown.

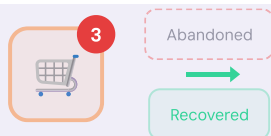

Content Pipeline

Auto-generate, review, SEO-optimize, and publish blog posts to WordPress

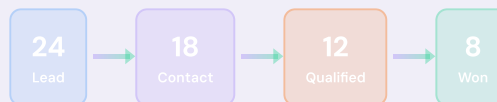

Social Media

Schedule and cross-post content across all platforms from one system

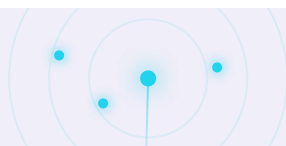

E-commerce

Cart recovery, product descriptions, order alerts, price monitoring

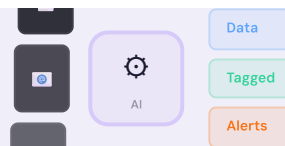

Sales & Outreach

Lead sync, follow-up sequences, competitor monitoring, CRM integration

AI Intelligence

News scanning, market research, sentiment analysis, trend detection

Operations

Invoice parsing, receipt OCR, email digests, voice transcription

Live System: ElektraOS

A real production automation platform I built and operate daily.

ElektraOS

OPERATOR CONSOLE

```
$ uvicorn main:app --port 8000
INFO: 624 routes loaded
INFO: 31 agents registered
• System online
```

ElektraOS is a full-stack automation system running 31 AI agents, 31 n8n workflows, and 624+ API endpoints. It handles content generation, SEO optimization, social media scheduling, job pipeline tracking, market intelligence, and e-commerce operations – all from a single dashboard.

How I Work

From discovery to deployment in 4 clear steps.

1. Discovery

Map your current workflows, identify repetitive tasks, and find the highest-impact automation opportunities.

2. Design

Architect the system with error handling, retry logic, monitoring alerts, and clear data flow diagrams.

3. Build

Implement workflows in n8n, Make, or Zapier with full end-to-end testing and edge case coverage.

4. Deploy

Launch with documentation, a monitoring dashboard, and hands-on training so your team owns the system.

Automation Intelligence & AI Costs

The sophistication of your automations depends on the AI models behind them. Standard models handle routine tasks like scheduling, notifications, and data syncing efficiently. Advanced models (Claude, GPT-4) enable smarter decision-making, natural language processing, and complex multi-step reasoning – with proportionally higher API costs. All AI/API costs are transparently itemized and passed through at cost, so you pick the intelligence level that fits your budget.

Pricing

Transparent pricing. All tiers include testing, documentation, and support.

Starter

\$150 USD

- 1 workflow
- 2-3 app connections
- Error handling
- 3-day delivery

POPULAR

Standard

\$400 USD

- 3-5 workflows
- API integrations
- Scheduling & triggers
- Documentation
- 7-day delivery

Advanced

\$900 USD

- Full automation system
- AI agents
- Monitoring dashboard
- Retry logic
- 14-day delivery

Ready to automate your business?

Stop doing manually what a machine can do in seconds. Let's build your automation stack.
